Tungaloy Report No. 409-G

TUNGSI<sup>X</sup>-DRILL

# The most economical solution for drilling!

Member IMC Group  
**Tungaloy**

ACCELERATED MACHINING

---

First double sided 6 cornered insert for drilling with superior performance.

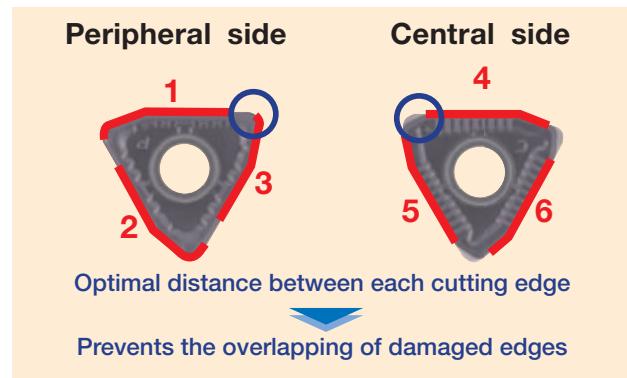

---

## Indexable drill

6 cornered insert with high performance and high economical solution

### Double-sided insert with 6-cutting edges

TungSixDrill is the first indexable drill in the world to adapt double-sided inserts with 6-cutting edges, reducing the insert consumption for the customers.

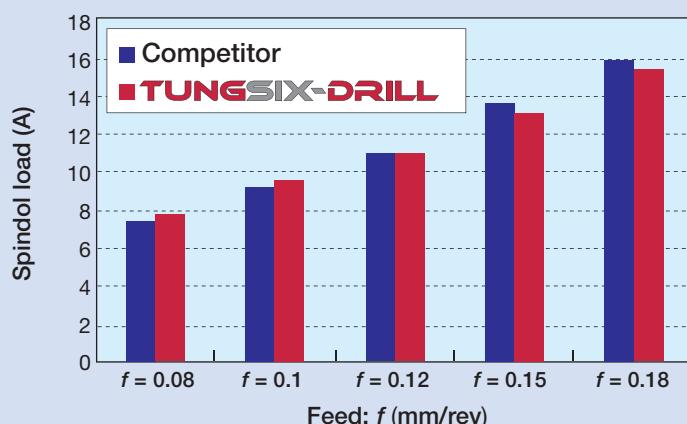

### One insert type for both the central and peripheral pockets

### Low cutting force even with double sided insert

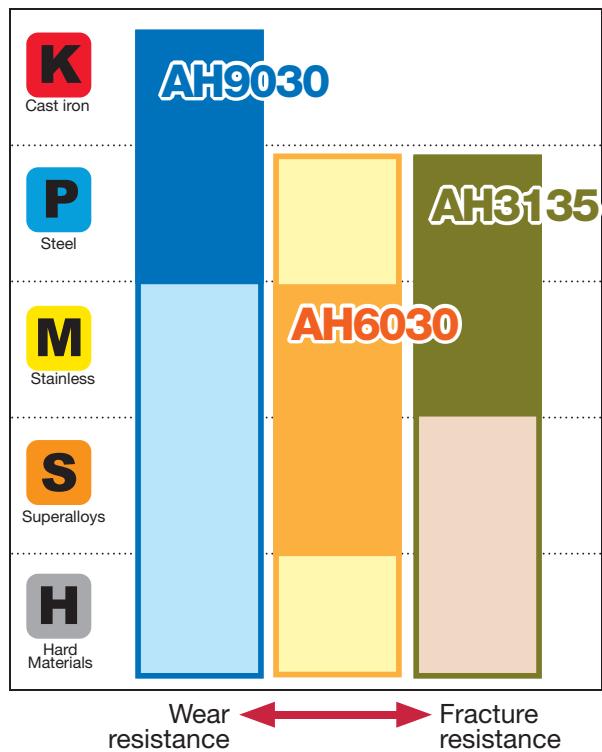

The cutting forces are almost equal to competitors positive single sided inserts, especially at higher feed rates, thus complementing higher productivity.

#### Spindle load

Drill : TDS200F25-3  
 Insert : WWMU05X205R-DJ  
 Grade : AH9030  
 Workpiece : S55C / C55  
 Cutting speed : Vc = 150 m/min  
 Feed : f = 0.08 - 0.18 mm/rev  
 Hole diameter : ø20 mm

## New revolutionary grade

### AH9030

Special Surface Technology  
**PREMIUMTEC**  
TUNGALOY

- Smooth insert surface prevents chip adhesion and provides smooth chip flow.
- New generation PVD coating with advanced wear and oxidation resistance provides stable long tool life.
- Unique substrate with high heat-resistance prevents crater wear.

### AH6030

Special Surface Technology  
**PREMIUMTEC**  
TUNGALOY

- Smooth insert surface prevents chip adhesion and improves chip control.
- New PVD coating with high adhesion strength prevents fracture caused by chip welding.
- Exclusive carbide substrate with high fracture resistance.

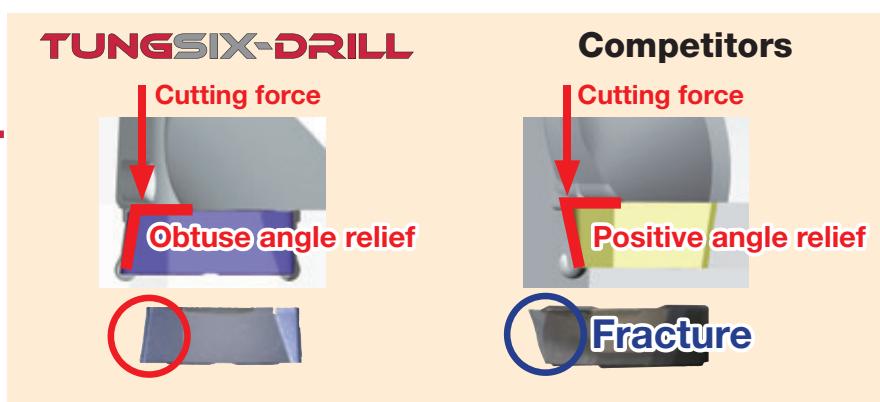

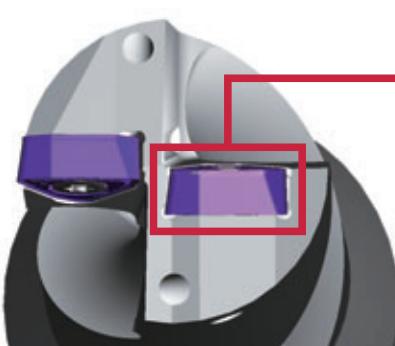

### AH3135

Special Surface Technology  
**PREMIUMTEC**  
TUNGALOY

- Multi-layered coating prevents crack expansion which causes chipping and fracture.
- Exclusive carbide substrate with remarkable impact resistance and toughness.

## Enhanced corner of central insert

The central corner is strengthened by an obtuse angle relief thus increasing the corner strength and reliability.

## Twisted coolant holes

Twisted coolant holes improve coolant flow, improving chip evacuation, cooling and lubrication of the cutting edges.

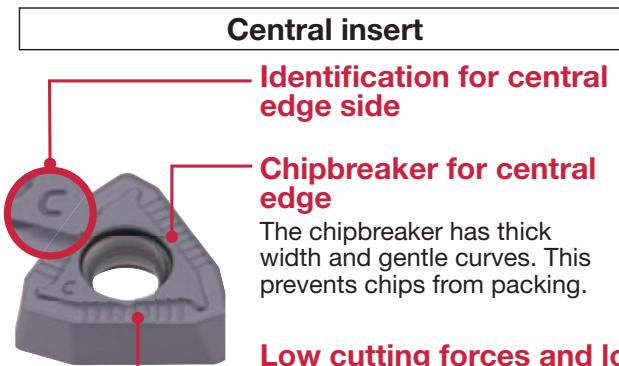

## Chipbreakers

### DJ type

**For General purpose**

Suitable for cutting of a wide range of work material

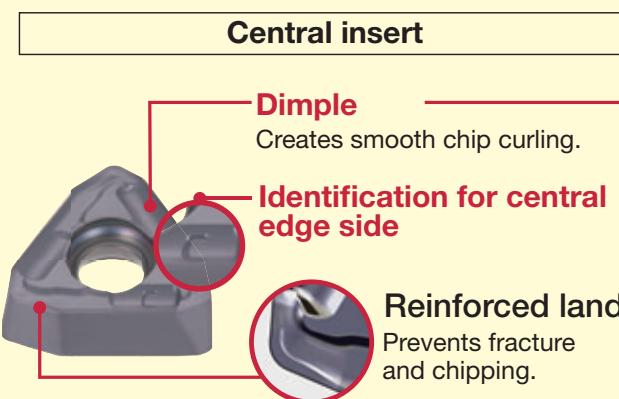

### Peripheral insert

### DS type

**For drilling stainless and gummy steels**

Demonstrates exceptional chip control

### Peripheral insert

### DS type

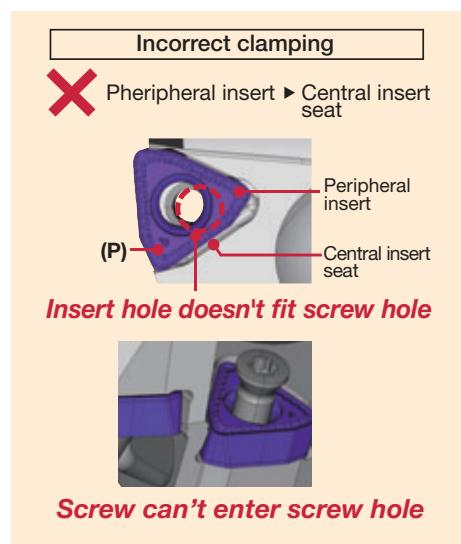

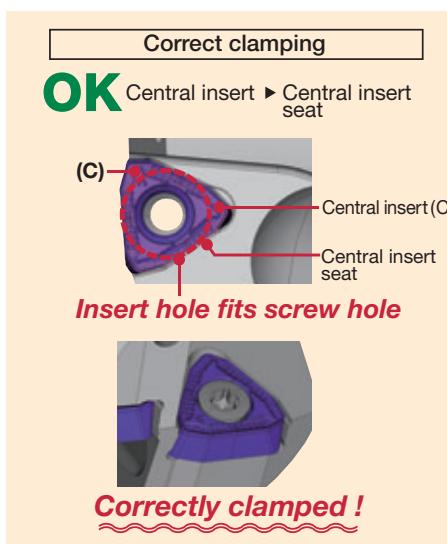

\* WWMU05... and WWMU06...does not have 'P' mark on the peripheral side.

\* WWMU05... and WWMU06...does not have 'P' mark on the peripheral side.

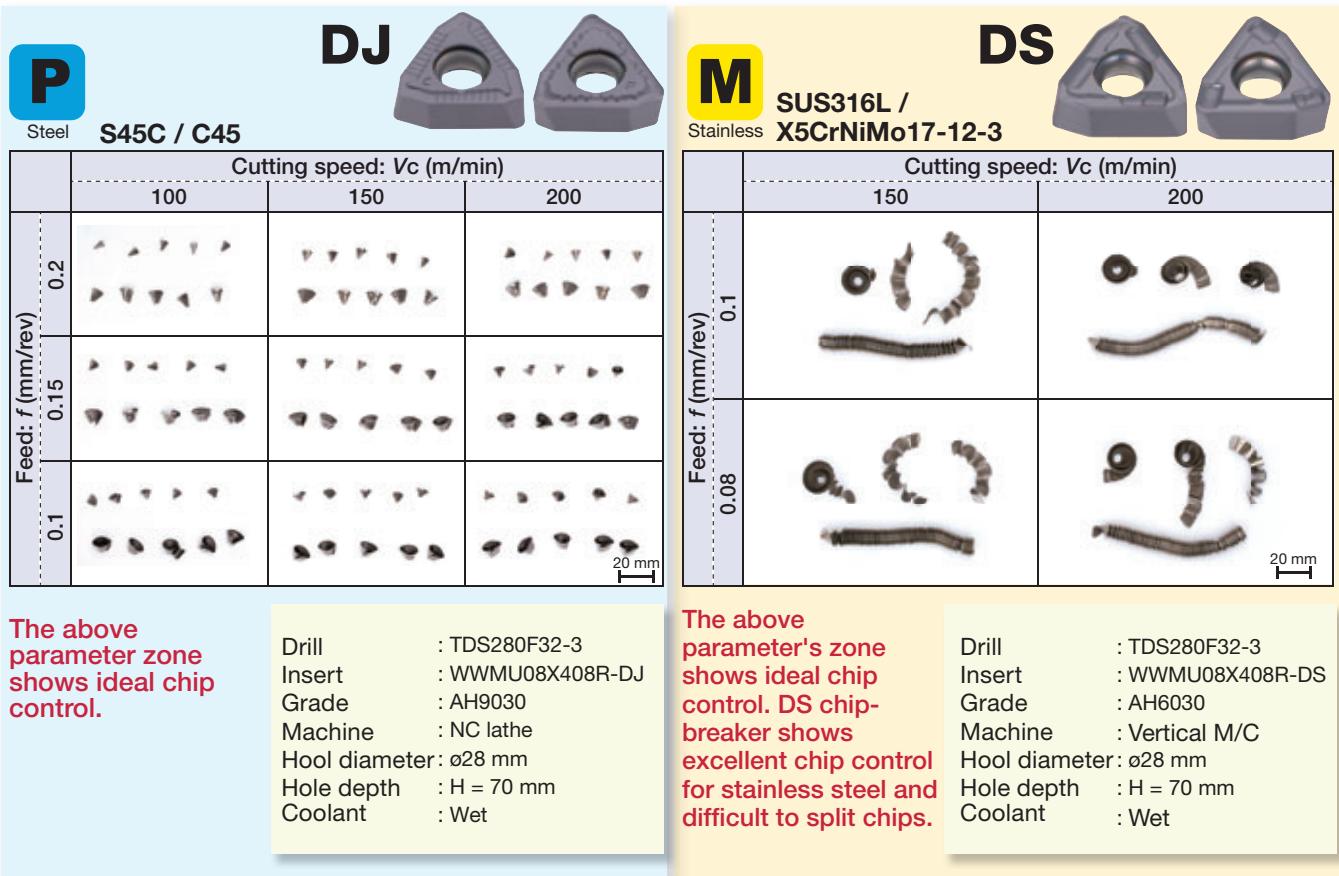

## System to avoid wrong insert clamping

TungSix-Drill insert and pocket design ensures correct insert positioning and clamping of central and peripheral inserts on its respective pockets.

Note: The drill is designed to avoid wrong insert clamping, however please check the central (c) and peripheral (p) marks on the insert before setting the insert.

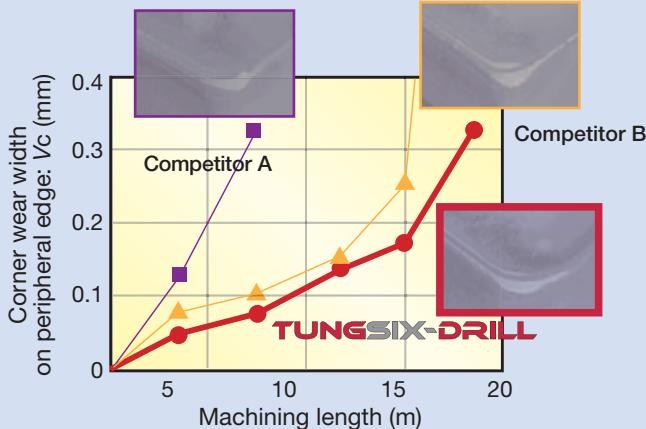

## Chip control

## Tool life

### ■ Excellent wear resistance of AH9030

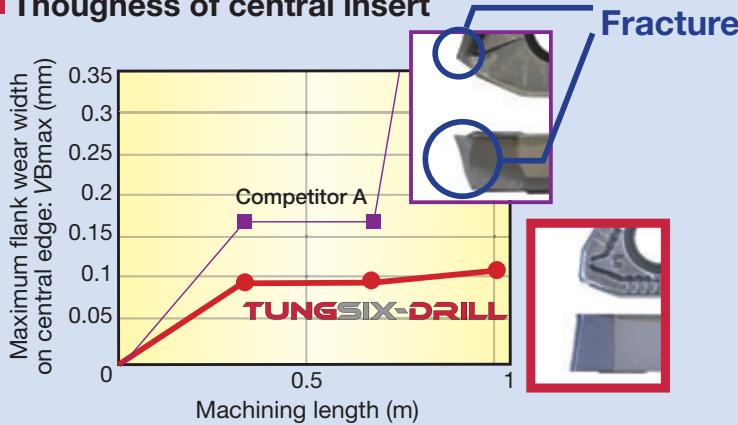

**P**

Drill : TDS280F32-3  
Insert : WWMU08X408R-DJ  
Grade : AH9030  
Workpiece : S55C / C55  
Cutting speed :  $V_c = 140$  m/min  
Feed :  $f = 0.1$  mm/rev  
Hole diameter : ø28 mm  
Hole depth : H = 84 mm  
Machine : Horizontal M/C, BT40  
Coolant : Wet (Internal supply)

AH9030 offers superior wear resistance against competitors.

### ■ Thougness of central insert

**P**

Drill : TDS280F32-3  
Insert : WWMU08X408R-DJ  
Grade : AH9030  
Workpiece : Pre-hardened steel (40HRC)  
Cutting speed :  $V_c = 100$  m/min  
Feed :  $f = 0.08$  mm/rev  
Hole diameter : ø28 mm  
Hole depth : H = 28 mm  
Machine : Vertical M/C, BT50  
Coolant : Wet (Internal supply)

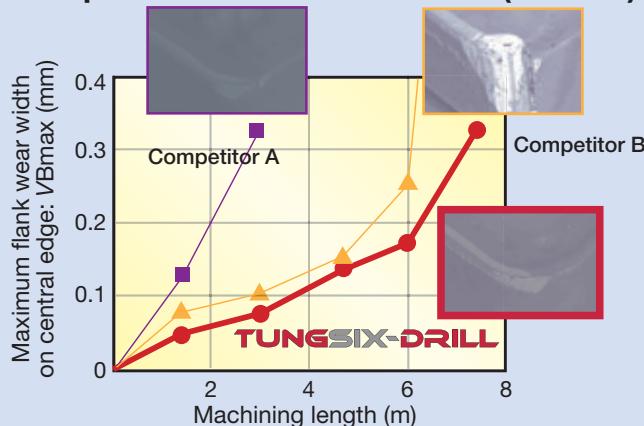

Enhanced corner of central cutting edge prevents fracture even in pre-hardened steel machining.

## Standard cutting conditions

ISO	Workpiece materials	Selection criteria	Chip-breaker	Grade	Cutting speed $V_c$ (m/min)
<b>P</b>	Low carbon steels ( $C < 0.3$ ) SS400, SM490, S25C etc. (St42-1, St52-3, C25 etc.)	First choice	DS	AH6030	160 - 250
	Carbon steels ( $C > 0.3$ ) S45C, S55C etc. (C45, C55 etc.)	Priority on wear resistance	DJ	AH9030	160 - 320
	Low alloy steels SCM415 etc.	First choice	DJ	AH9030	80 - 250
	Alloy steels SCM440, SCr420 etc. (42CrMo4, 20Cr4 etc.)	Priority on impact resistance	DS	AH3135	160 - 250
<b>M</b>	Stainless steels (Austenitic) SUS304, SUS316 etc. (X5CrNi18-9, X5CrNiMo17-12-2 etc.)	First choice	DS	AH6030	100 - 200
	Stainless steels (Martensitic and ferritic) SUS430, SUS416 etc. (X6Cr17, X20Cr13 etc.)	Priority on impact resistance	DJ	AH3135	100 - 200
	Stainless steels (Precipitation hardening) SUS630 etc. (X5CrNiCuNb16-4 etc.)	First choice	DS	AH6030	100 - 200
	Priority on impact resistance	DJ	AH3135	80 - 120	
<b>K</b>	Grey cast irons FC250 etc. (GG25 etc.)	First choice	DJ	AH9030	80 - 250
	Priority on impact resistance	DJ	AH3135	80 - 200	
<b>N</b>	Ductile cast irons FCD700 etc. (GGG70 etc.)	First choice	DJ	AH9030	80 - 200
	Priority on impact resistance	DJ	AH3135	80 - 150	
<b>S</b>	Aluminium alloy	First choice	DS	AH6030	200 - 400
	Priority on impact resistance	DJ	AH9030	200 - 400	
<b>H</b>	High temperature alloy Inconel718 etc	First choice	DS	AH6030	20 - 60
	Priority on impact resistance	DJ	AH3135	20 - 60	
<b>T</b>	Titanium Alloy Ti-6Al-4V etc.	First choice	DS	AH6030	40 - 120
	Priority on impact resistance	DJ	AH3135	40 - 120	
<b>H</b>	Hardened steel Over 40HRC	First choice	DS	AH9030	50 - 100
	Priority on impact resistance	DJ	AH3135	40 - 80	

**P**

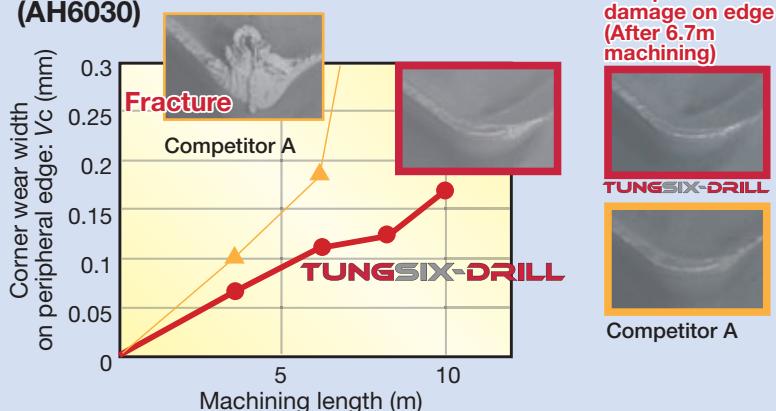

## Comparison of tool life for steel (AH9030)

Drill : TDS280F32-3  
Insert : WWMU08X408R-DJ  
Grade : AH9030  
Workpiece : S55C / C55  
Cutting speed:  $V_c = 250$  m/min  
Feed :  $f = 0.1$  mm/rev  
Hole diameter :  $\phi 28$  mm  
Hole depth :  $H = 84$  mm  
Machine : Horizontal M/C, BT40  
Coolant : Wet (Internal supply)

The wear and oxidation resistance of AH9030 is enhanced in high speed machining.

## Comparison of tool life for stainless steel (AH6030)

Drill : TDS280F32-3  
Insert : WWMU08X408R-DS  
Grade : AH6030  
Workpiece : SUS304 / X5CrNi18-9  
Cutting speed:  $V_c = 200$  m/min  
Feed :  $f = 0.1$  mm/rev  
Hole diameter :  $\phi 28$  mm  
Hole depth :  $H = 84$  mm  
Machine : Vertical M/C, BT50  
Coolant : Wet (Internal supply)

Even when machining stainless steel, cutting edge damage on AH6030 is minimal. This is credit to its high adhesion strength.

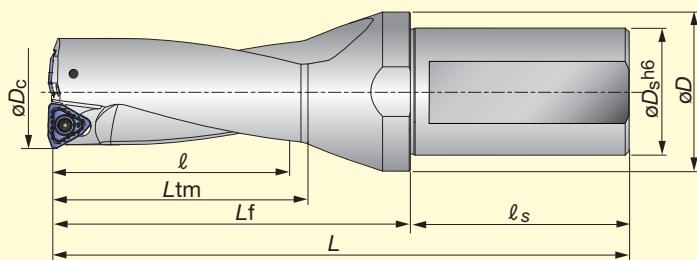

Feed:  $f$  (mm/rev)

# Chamfering ring "TDXCF Series"

The TDXCF Series with the TungSix-Drill performs both drilling and chamfering at the same time, reducing machining processes and machining time.

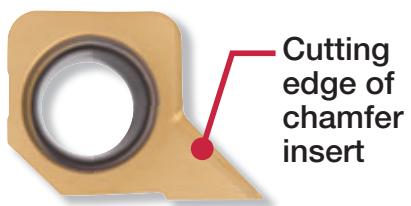

## Features

- High productivity with two inserts.
- Optimum space between the drill body and chamfering inserts prevents cutting edges from fracture.

- Insert grade is GH130 with TiCNO coating for steels.
- Suitable for machining steel, stainless steels and cast irons.

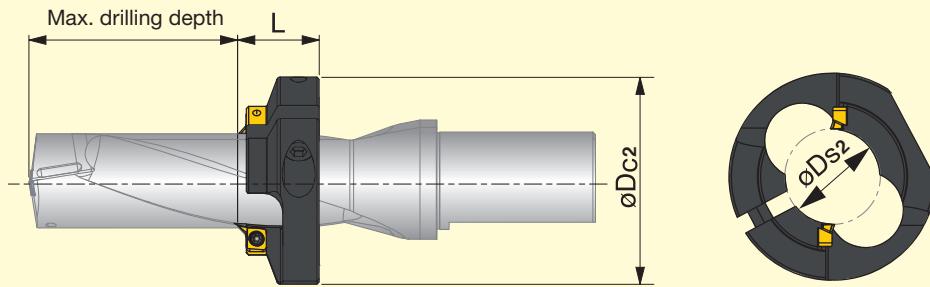

## Chamfering tool insert & part list

## - Points of caution when mounting the chamfering ring on drill body

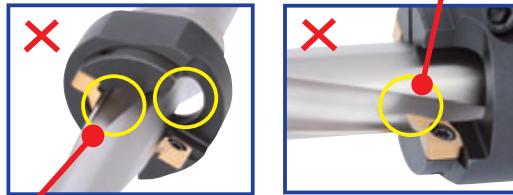

- ① Place the ring on the drill body and match the ring flute with the drill flute. Temporarily clamp the ring on the body by lightly tightening the ring screw. Place the inserts on the ring and lightly tighten the insert screws.
- ② Adjust the ring to the right position with a presetter, height gauge or vernier caliper.
- ③ Securely tighten the ring screw and then the insert screw.

**Match the ring flute with the drill flute**  
(Insert will be automatically set to the right position)

**The ring flute does not match the drill flute**

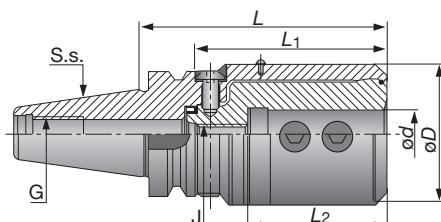

**Insert is in the wrong position due to incorrectly placed ring**

# TUNGBORE Adjustable drilling diameter holder

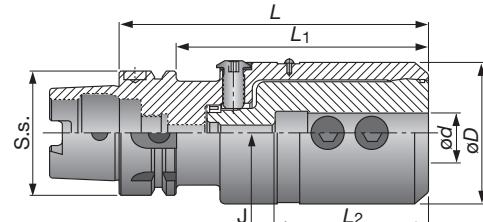

Enables diameter of TungdrillTwisted to adjust easily

The bore section is actually made from two shifted circular sections. The clamping screw pushes the drill shank through a narrow opening, forcing elastic deformation of the holder. Contact is made around more than 180°, providing a high clamping force.

Regarding adjustment, please refer to the operating instructions in the TungBore leaflet for the TungHold (No. 389-E)

## EZ sleeve (Eccentric sleeves for TungSix-Drill)

### The function of EZ sleeves

#### Adjusting the hole diameter when drilling

Adjusting the hole diameter in tool-rotating applications.

By using EZ sleeve, the hole diameter can be adjusted in the range from **+0.6 mm to -0.2 mm**.

Scale for adjusting the hole diameter in milling machine (Periphery of sleeve)

#### Adjusting cutting edge height on lathe

Adjusting the cutting edge height in rotating work applications.

By using EZ sleeve, the cutting edge height can be adjusted in the range from **+0.3 mm to -0.2 mm**. That reduces troubles caused by improper cutting-edge height.

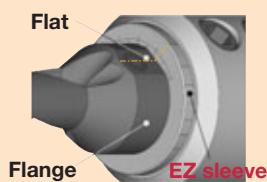

Scale for adjusting cutting edge height in turning (Front face of sleeve)

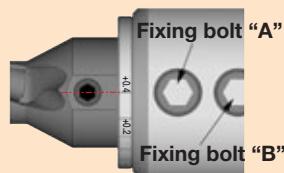

## Setting of EZ sleeve

### Adjusting the hole diameter on M/C

Set the EZ sleeve between the drill shank and the holder. Align the scale on the periphery of EZ sleeve with the center of the flat on drill flange.

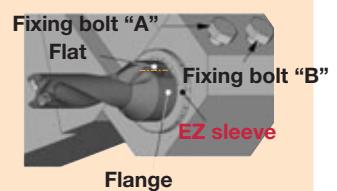

In the figure shown on right, the sleeve is set and the hole diameter will be increased by 0.4 mm.

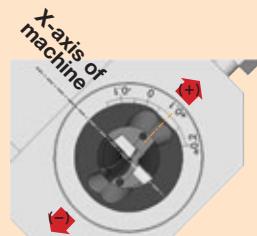

When rotating EZ sleeve, fixing bolts "A" and "B" have to be loosened. After setting the hole diameter, fix the drill body with bolt "A". Then lightly tighten the bolt "B" to fix EZ sleeve. If the bolt "B" is over tightened, EZ sleeve may be damaged.

### Adjusting cutting edge height on lathe

Set the EZ sleeve between the drill shank and the toolblock. Align the scale on the front face of the EZ sleeve with the center of the flat on drill flange.

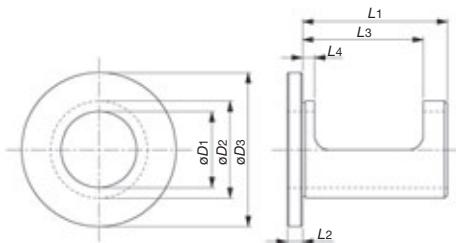

In the figure shown on right, the sleeve is set and the center of the drill will shift by 0.1 mm to the plus (+) direction.

### Cautious points

- Cannot be used for collet chuck holders.
- For adjustments over L/D = 4, please reduce feed rate.
- For smaller adjustment, the drill itself will interfere with the hole diameter. It is recommended that hole diameter should be adjusted to a larger diameter than the drill diameter.

## - Specifications

Sleeve Designation	Stock	Dimensions (mm)							Adjusting range of finishing diameter	Adjusting range of cutting edge height
		$\phi D1$	$\phi D2$	$\phi D3$	L1	L2	L3	L4		
EZ2025	●	20	25	46	49	5	32.5	4	+0.4 ~ -0.2	+0.2 ~ -0.15
EZ2532	●	25	32	51	52	5	38	4	+0.4 ~ -0.2	+0.2 ~ -0.15

EZ4050	●	40	50	69	63	5	55	4	+0.6 ~ -0.2	+0.3 ~ -0.2

Note: Select the sleeve so that the D1 of the sleeve will be same as the diameter of the drill shank.

● : Stocked items

### Cautious points

#### Using TungSix-Drill

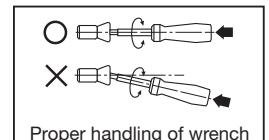

- Ensure that the drilling machine to be used has sufficient rigidity and motor output.
- Not recommended for drilling stacked plates.
- Be sure to carry out proper alignment when drilling is to be performed on a rotating workpiece.

#### Cutting fluid

- Be sure to supply cutting fluid through the tool.
- A water soluble emulsifiable type cutting fluid should be used.
- Fluid pressure of 1 MPa or higher and fluid quantity of 7 l/min or more are essential. For 4D and 5D type, a fluid pressure of 1.5 MPa or higher and fluid quantity of 10 l/min or more is recommended.

#### Cautionary points for setting inserts

- Before installing the insert in the drill body, remove all foreign matter from the insert pocket.
- When clamping and unclamping the insert, the center-line of the wrench should be aligned with the center-line of the screw. Misalignment may result in deformation of the socket of the screw head or the tip of the wrench.
- When installing the insert, eliminate all play between the insert pocket and the bottom face of the insert.
- Replace the screw before it is excessively deformed or worn out by long term use.

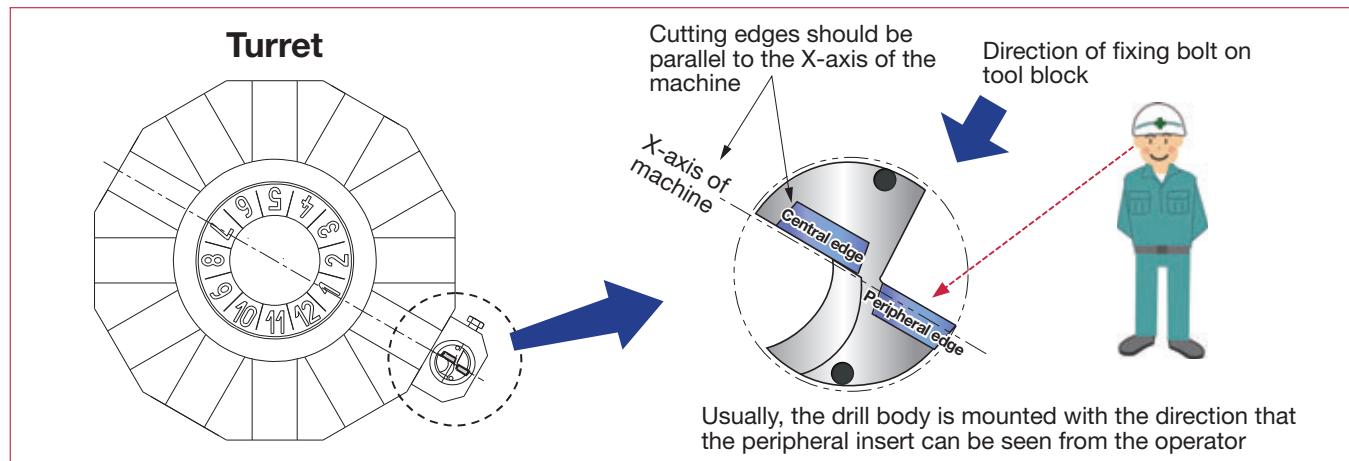

Proper handling of wrench

# Use of TungSix-Drill on lathes

## Setting of drill body is an important point for stable machining

### Mounting the drill on turret (tool post)

- When mounting drill body, the cutting edges should be parallel to the X-axis of the machine.
- Usually, the drill body is mounted in the direction that the peripheral insert can be seen by the operator.
- As the cotter on shank is parallel to the cutting edges, the clamping of the drill ensures that the cutting edges are parallel to the X-axis of the machine.

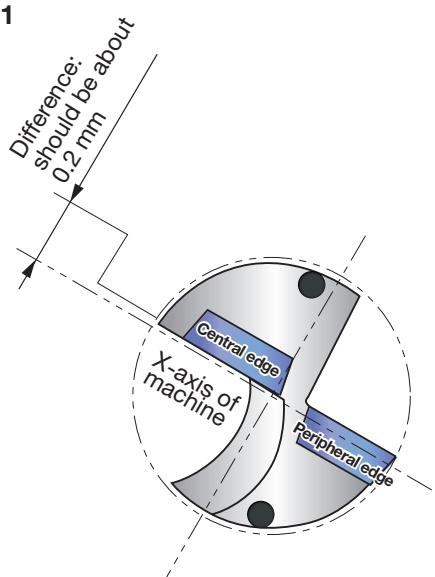

### Checking of cutting edge height

- The cutting edge height is an important factor for stable machining.
- The cutting edge of central insert should be 0.2 mm lower than the rotating axis of machine.
- For checking the difference between rotating center and the tool block, please use a reference bar from ground solid bar. (Fig. 2)

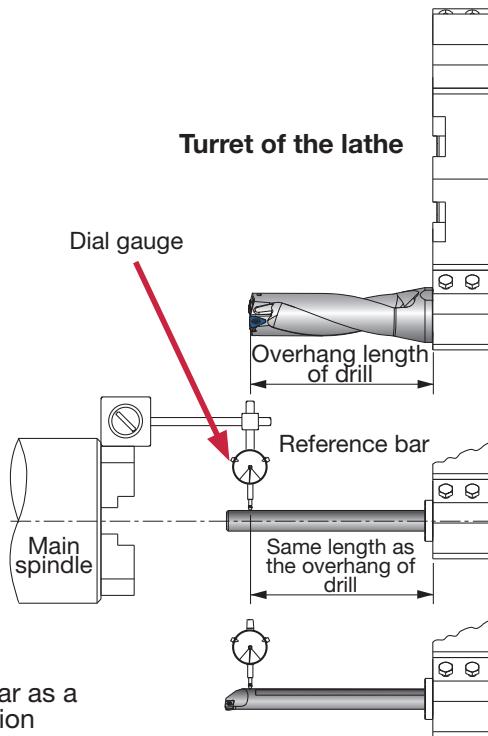

- In this case, the checking of the center height should be measured at the same position as the overhang length of the drill required.
- When there isn't a reference bar, the ground part of a boring bar can be used as a substitute.

Fig. 1

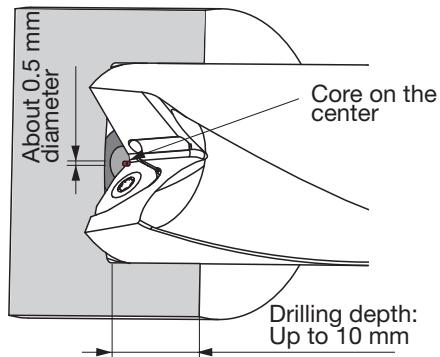

If the condition of cutting edge height is not good, basically the height should be set by adjusting the turret.  
But, a simple method is shown in the next page.

Fig. 2

## Checking of setting conditions by trial cutting

- After mounting the drill body, the tool center should be checked by trial cutting before production.
- When the drill body is properly set, a core with about ø0.5 mm diameter is left on the bottom of hole.
- If there is no core, the drill is “above center”. If the core diameter is larger than ø1mm, it is “excessively below center”. In these cases, the cutting edge height has to be checked again.
- When trial cutting, the feed should be 0.1 mm/rev or less, drilling depth should be up to 10 mm.

## Adjusting of cutting edge height

When the condition of the cutting edge height is incorrect, the height should be adjusted with the following methods.

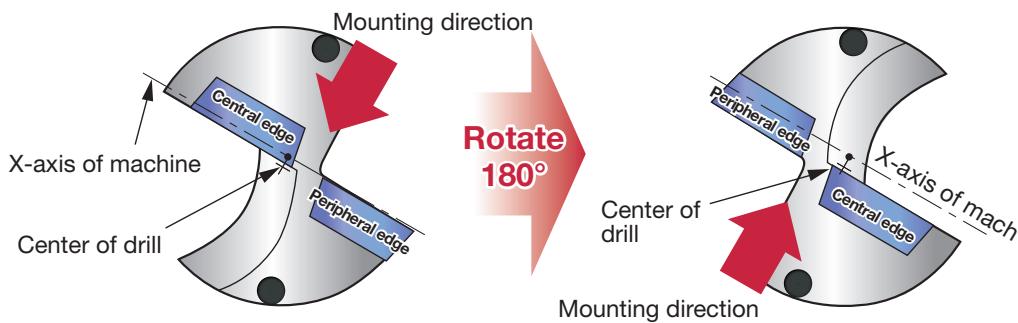

### ① In the case of “above-center”

When machining with such condition, the central cutting edge may be easily chipped. So this condition has to be rectified.

Solution #1: Change the mounting direction.

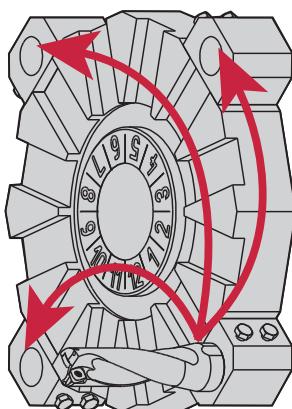

Solution #2: Rotate drill body 180°

In #2, additional cotter is required on the opposite side.

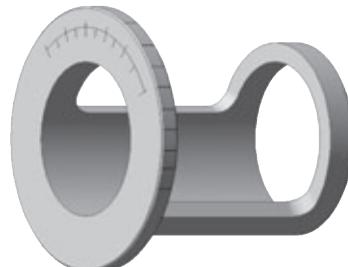

### ② In the case of “slightly above-center” (about 0.05 mm)

In this case, shifting the mounting position to another position may improve the condition.

### ③ In the case of “excessive below-center” (0.2 mm or more)

When this occurs, the large diameter of the core remains and heavy vibration may occur. To improve this situation: Use EZ sleeve (the eccentric sleeve) and adjust the cutting edge height to correct value. Information on EZ sleeve, is on page 14.

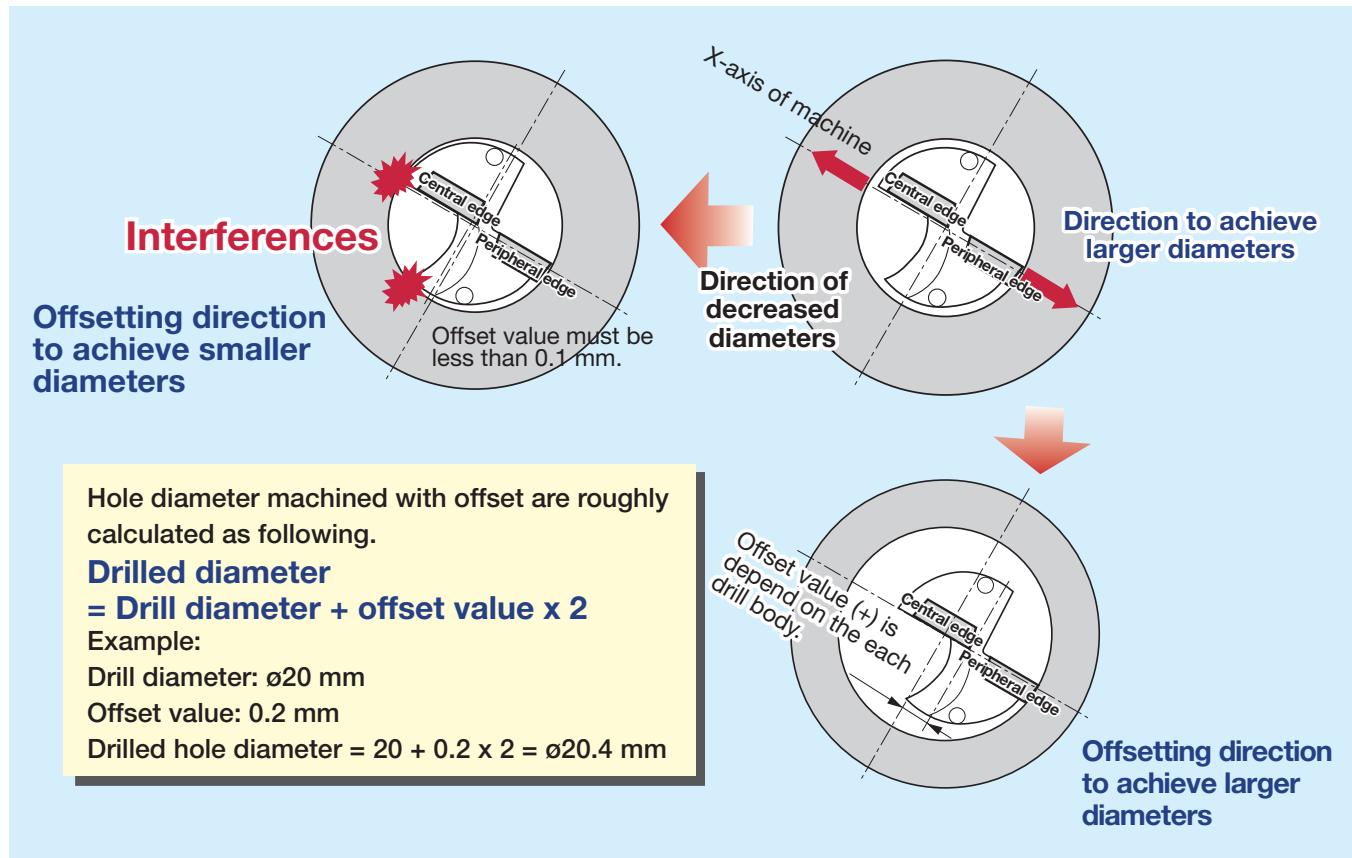

## Machining with offset on the lathe

### A larger hole than the drill diameter can be machined!

#### ● Drilling with offset

- When drilling on the lathe, the hole diameter can be adjusted by offsetting the drill body along the X-axis of machine.

- When drilling with offset, the drill body must be correctly mounted with cutting edges parallel to the X-axis of the machine. "Mounting the drill on the turret" can be viewed on previous page.

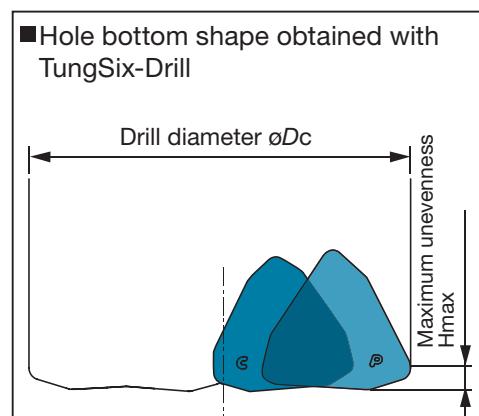

Note: Each drill depending on the cutting balance, insert tolerance, and 4D machines different size of hole. This deviation should be considered while deciding the offset value.

## Shapes of hole bottom

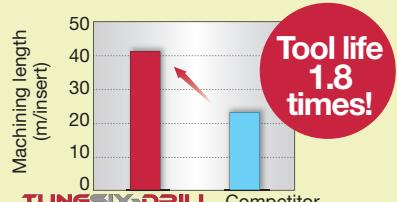

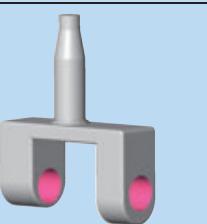

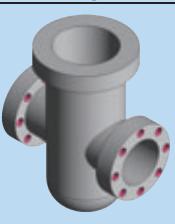

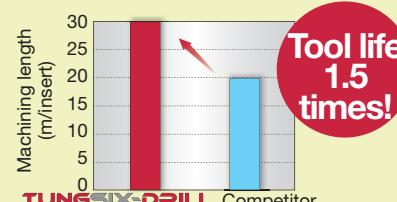

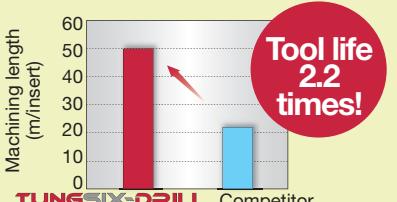

### Un-evenness of the hole-bottom face when machined with TungSix-Drill is smaller than with HSS drills!

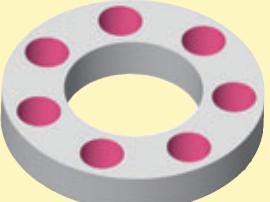

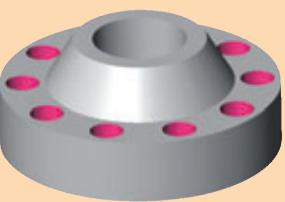

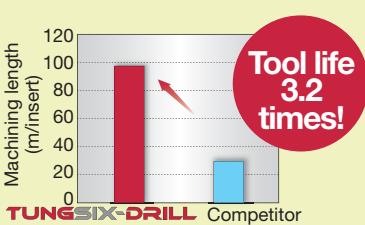

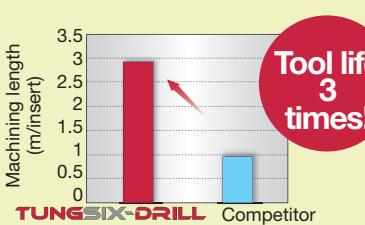

The shape of the hole bottom machined with TungSix-Drill is closer to flat compared with those machined with HSS drills.

Cutting conditions	Cutting speed: $V_c$ (m/min) Feed: $f$ (mm/rev) Feed speed: $V_f$ (mm/min) Drilling depth: $H$ (mm) Machine Coolant	160 0.11 112 80, 65 Horizontal M/C, BT50 Wet	180 0.18 369 50 Horizontal M/C, BT40 Wet
Results	 <p>Machining length (m/insert)</p> <p><b>TUNGSIK-DRILL</b> Competitor</p> <p>Tool life 1.5 times!</p> <p>The machining of TungSix-Drill is highly stable without chattering due to lower cutting forces. No sudden fracture and 6 corners of insert reduce the machining cost.</p>	 <p>Machining length (m/insert)</p> <p><b>TUNGSIK-DRILL</b> Competitor</p> <p>Tool life 2.2 times!</p> <p>Improved tool life per corner leads to reduction of insert consumption. DJ chipbreaker allows excellent chip control and stable machining without vibration.</p>	

Workpiece type	Flange	Flange
Drill	TDS290F32-2, $\phi D_c = 29$ mm	TDS350F40-3, $\phi D_c = 35$ mm
Insert	WWMU08X408R-DS	WWMU09X510R-DS
Grade	AH6030	AH6030
	SUS304 / X5CrNi18-9	Inconel 625
Workpiece material	 M	 S
Cutting conditions	140	40
Feed: $f$ (mm/rev)	0.075	0.06
Feed speed: $V_f$ (mm/min)	120	22
Drilling depth: H (mm)	29	60
Machine	Vertical M/C, BT50	Vertical M/C, BT50
Coolant	Wet	Wet
Results	 <p>Machining length (mm/insert)</p> <p>The DS chipbreaker creates well controlled chips and the AH6030 provides longer tool life with improved chipping resistance.</p>	 <p>Machining length (mm/insert)</p> <p>AH6030 with high reliability allows longer tool life. When machining super alloys such as Inconel, inserts with higher number of corners are very effective for reducing tool cost.</p>

Workpiece type	Link	Slewing ring
Drill	TDS240F25-3, $\phi D_c = 24$ mm	TDS330F40-4, $\phi D_c = 33$ mm
Insert	WWMU060306R-DJ	WWMU09X510R-DJ
Grade	AH9030	AH9030
	SCM440 / 42CrMo4	SCM440 / 42CrMo4
Workpiece material	 P	 P
Cutting conditions	130	180
Feed: $f$ (mm/rev)	0.1	0.15
Feed speed: $V_f$ (mm/min)	170	260
Drilling depth: H (mm)	40	100
Machine	Vertical M/C, BT40	Vertical M/C, BT50
Coolant	Wet	Wet
Results	 <p>Machining length (mm/insert)</p> <p>Tough cutting edges prevents chipping even in interrupted drilling condition and provides longer tool life.</p>	 <p>Feed speed (mm/min)</p> <p>Due to high rigidity, TungSix-Drill can machine without chattering even at higher cutting speed than competitor. Increased number of cutting edge and higher productivity drastically reduces the machining cost.</p>
